

EDGE™

SAFETY-RATED
EYEWEAR

INDUSTRIAL | NORTH AMERICA | 26.1

BUILT FOR MORE

For more than 25 years, we've questioned everything about safety eyewear and designed protective glasses that our customers want to wear. We've never been content with the status quo. And we've never strayed from our habit of disrupting the safety eyewear industry. We create safety glasses that feel good, look great, and exceed the performance of any other on the market.

Because our vision is protecting yours, we'll stay committed to designing eyewear Built for More.

SAFETY

Some so-called “safety glasses” aren’t tested for compliance with ANSI, CSA or other associations’ written standards. These other safety eyewear brands simply stamp the industry markings on their glasses without testing them for compliance with an independent lab. We always test our safety glasses with a third-party lab to ensure complete compliance with industry standards. Section 2.3.5 of the ANSI Z87.1 standard states: “The protector manufacturer shall provide test results to the purchaser upon request.” That means, if ever in doubt of the protective qualities of safety glasses, you have the right to ask for test reports. We always provide reports upon request to verify the ANSI Z87.1 or any other standards testing we have performed on all our safety glasses.

DURABILITY

We construct our frames from a durable nylon composite. This material gives our frames more durability and flexibility than many other glasses on the market. And we always thoroughly dip our lenses in an anti-scratch coating that provides abrasion resistance and keeps our lenses clear for longer. It’s this anti-scratch treatment that provides a superior level of lens durability.

CLARITY

We were the first to bring polarized safety glasses to market. We pioneered an anti-fog technology (Vapor Shield) that lasts longer and performs better than others. Our Aqua Precision lenses improve visual clarity in bright conditions and help enhance visibility in high-contrast environments. And our compliance with various safety standards requires optically accurate lenses across our entire lineup.

PRODUCT **TIER S**

We've categorized our collection of safety glasses into four tiers based on the product selection's available technologies, cost and intended user. Use this tiered system to select the Edge frame styles best suited to your case and budget.

TIER 1

\$20-\$50 MSRP

A safety-rated glass designed to the fit, styling, and function of sport and fashion glasses. Meant to be worn on and off the jobsite.

TIER 2

\$12-\$20 MSRP

Glasses for the professional worker as often spec'd by safety directors in the workplace.

TIER 3

\$6-\$12 MSRP

Glasses for the industrial worker as often spec'd by safety directors.

TIER 4

\$2-\$6 MSRP

Glasses for short-term or disposable use in the industrial environment.

SAFETY **STANDARDS**

According to the CDC and Department of Labor, there are over 10,000 eye injuries in North America every day. Approximately 2,000 of these injuries require medical treatment and 3–5 days off work. Additionally, many are shocked to learn that 63% of all eye injuries happen away from work—at home and during recreational activities. To decrease these statistics, the American National Standards Institute (ANSI/ISEA), Canadian Standards Association (CSA), and Military Combat Eye Protection Systems (MCEPS) created intense impact and rigorous optical tests to determine the quality and effectiveness of safety eyewear. Edge Eyewear glasses are independently tested by the accredited COLTS Laboratory for compliance with ANSI/ISEA Z87.1+, EN166, CSA Z94.3 and MIL-PRF 32432-A standards.

ANSI Z87.1+ is the American National Standard Institute's most current safety rating. The most common set of accepted Safety Standards on jobsites, manufacturing, and industrial facilities is the "High Impact" (indicated by a + symbol) version of ANSI/ISEA Z87.1. The standard requires very thorough testing in the Optical Clarity, Impact Resistance, and Coverage aspects of safety eyewear.

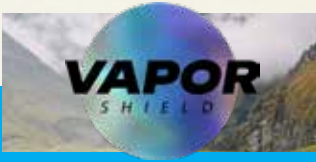

CSA Z94.3 is a regulatory standard created by the Canadian Standard Association (CSA) for eye protection. This standard is promoted by the Canadian Centre for Occupational Health and Safety (CCOHS), which functions as the primary national agency for the advancement of safe workplaces and preventing work-related injury. Additional work in this area is carried out by provincial and territorial labour departments and workers' compensation boards.

LENS

TECHNOLOGY

VAPOR SHIELD

The world's first "Military Grade" Anti-Fog which is completely resistant to humidity, steam, fog and condensation in the most extreme conditions and temperatures. The result? Clear, pristine vision.

POLARIZED

Polarized technology can be compared to horizontal blinds where slats create a filtering layer that blocks glare from above and reflected light from below, allowing only direct light rays to enter. This reduced glare is ideal for environments with bright sun, snow, water, or sand.

AQUA PRECISION PLUS

Aqua Precision + (AP+) builds on the legacy of our long-standing Aqua Precision lens technology. AP+ lenses amplify red, orange and green hues, while maximizing contrast in bright conditions with an unmistakable style that's easy on the eyes.

AQUA PRECISION

Aqua Precision lenses maximize visual clarity and contrast in bright light conditions. Instead of using a traditional "layering mirror on smoke" lens process, anti-reflective ions are infused into a clear lens resulting in a mirrored look that maintains pristine clarity.

WELDING

Welding lenses filter low (IR3) and medium (IR5) levels of infrared light produced during gas welding, brazing and torch cutting. Potentially dangerous levels of UVC light exist with these activities. Edge's welding lenses will protect you from those harmful rays and any debris.

G-15

By maximizing transmission of yellow and green light in the middle of the light spectrum, G-15 lenses reduce eye strain and create a cooling sensation to the eyes. This technology is perfect for a variety of bright light conditions and maintaining true-to life color perception.

BLUE LIGHT

Blue light has short wavelengths, which cause the eye to focus too far in front of the retina. The result is a blue blur that can cause eyestrain. Copper, amber, and yellow colored lenses reduce blue light to give greater depth perception and brighter, defined surroundings.

PHOTOCHROMIC

If you work in environments with changing light, our photochromic lenses can simplify your eye protection requirements. These lenses transition when exposed to UV rays. At their lightest state, they allow 87% of light to pass through, but in their darkened state, the lenses only allow 22% of light to pass through.

MAGNIFIERS

Magnifiers are perfect for viewing intricate work and fine details. They are available in three magnification powers (1.5, 2.0, and 2.5).

FRAME

TECHNOLOGY

MULTI-FIT

With an adjustable TPR nosepiece, a perfect fit can be achieved for a variety of facial structures by bending each flexible nosepad inward, outward, forward, or backward.

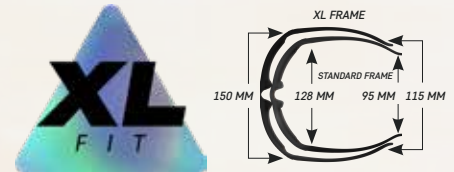

RX FIT OVER

Safety is too often compromised when non-compliant prescription eyewear is used alone to see fine details when performing a dangerous task. Safety-rated Fit Over RX glasses comfortably fit over most prescription eyeglasses to ensure safe, clear vision.

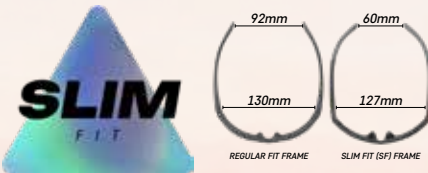

XL WIDE FIT

Safety and comfort should never be compromised by ill-fitting eyewear. To accommodate the diversity of head shapes and sizes, the wide fit frame has an additional 22mm of width at the temple.

SLIM FIT

Our Slim Fit (SF) frame styles are designed for individuals with more compact facial profiles. Engineered to provide a more secure and tailored fit, SF styles help reduce slippage for those who find standard frames too wide.

GASKETS

When working in environments with high levels of airborne debris or dust, this technology creates a TPR seal that keeps foreign particles away from the eyes.

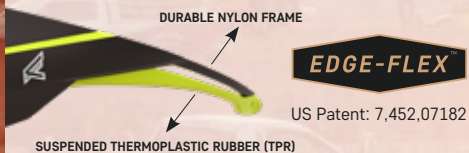

UPLC COMPATIBLE

Our Makalu frame style is compatible with our UPLC RX inserts (see page 44 for RX insert). These devices allow for a prescription carrier to be added inside of the frame for a secure fit, sure vision and ultimate protection.

EDGE-FLEX™ TEMPLES

Frames that feature Edge-Flex™ offer a tailored, custom-like fit. This technology employs a floating thermoplastic rubber (TPR) element in the temples that provides comfort-improving flexibility. Edge-Flex™ can stop pinching behind the ears, while simultaneously limiting slipping and reducing overall weight.

LENS TRANSMISSION

EDGE EYEWEAR LENSES PROVIDE 99.9% UVA, UVB, UVC PROTECTION

CLEAR

85%

LIGHT TRANSMISSION

Clear lenses are the classic option for safety. With pristine clarity, they are an excellent choice for indoor and low-light conditions.

Indoor, Low Light Conditions

LIGHT BLUE

69%

LIGHT TRANSMISSION

Light blue lenses decrease eye fatigue resulting from yellow light. They are perfect for indoor settings with yellow incandescent, yellow fluorescent, or sodium vapor lighting.

Indoor, Low Light Conditions

Hazy Conditions

Cloudy Conditions

ANTI-REFLECTIVE

50%

LIGHT TRANSMISSION

Anti-reflective lenses can be used in most indoor and outdoor conditions. A light silver mirror coating on a clear lens reflects excess light and reduces glare.

Indoor, Low Light Conditions

Hazy Conditions

Cloudy Conditions

SMOKE

16%

LIGHT TRANSMISSION

Smoke lenses provide the perfect all-around tint for bright light conditions. This popular lens color blocks sun rays without causing color distortion.

Bright, Clear Conditions

Partly Cloudy Conditions

AQUA PRECISION RED MIRROR

15%

LIGHT TRANSMISSION

Aqua precision red mirror lenses maximize visual clarity & contrast in bright light conditions. Rather than using a layering process, anti-reflective ions are infused into a flame-colored mirror to maintain pristine optics.

Desert Conditions

High Altitude Snow, Cloudy Conditions

Bright, Clear Conditions

High Altitude Snow, Clear Conditions

YELLOW

80%

LIGHT TRANSMISSION

Yellow lenses make dull, overcast conditions appear brighter and filter low levels of blue light. They also increase depth perception and contrast during dawn or dusk activities, including night driving.

Indoor, Low Light Conditions

Hazy Conditions

Cloudy Conditions

AMBER

57%

LIGHT TRANSMISSION

Amber lenses make dull light conditions appear brighter and filter medium levels of blue light. They also increase depth perception and clarity in situations with flat light or minimal contrast.

Cloudy Conditions

Hazy Conditions

COPPER

21%

LIGHT TRANSMISSION

Copper lenses make outdoor conditions appear sharper by filtering high levels of blue light. Copper also increases depth perception and contrast, making it the ideal tint for daytime driving and golfing.

Cloudy Conditions

Hazy Conditions

Bright, Clear Conditions

POLARIZED COPPER

15%

LIGHT TRANSMISSION

Polarized copper lenses make outdoor conditions appear sharper by filtering high levels of blue light. Copper also increases depth perception and contrast, making it the ideal tint for daytime driving. The polarized filter increases clarity by reducing glare.

Desert, Reflective Conditions

High Altitude Snow, Cloudy Conditions

Water, Reflective Conditions

High Altitude Snow, Clear Conditions

AQUA PRECISION PLUS GREEN MIRROR

15%

LIGHT TRANSMISSION

AP+ lenses amplify red, orange and green hues, while staying true to the clarity-improving foundation of our standard Aqua Precision technology. Delivered in a green tint, AP+ maximizes contrast in bright conditions.

Desert Conditions

High Altitude Snow, Cloudy Conditions

Bright, Clear Conditions

High Altitude Snow, Clear Conditions

POLARIZED SMOKE

14%

LIGHT TRANSMISSION

Polarized smoke lenses provide the perfect all-around tint for bright conditions. This lens color blocks sun rays without causing color distortion. The polarizing filter increases clarity by reducing glare.

Desert, Reflective Conditions

Bright, Clear Conditions

Water, Reflective Conditions

Partly Cloudy Conditions

SILVER MIRROR

13%

LIGHT TRANSMISSION

Silver mirror lenses decrease visible brightness while maintaining true-to-life color. A silver-colored mirror coating adds a reflective layer to the light-filtering properties of a smoke base tint.

Bright, Clear Conditions

Desert, Reflective Conditions

BLUE MIRROR

12%

LIGHT TRANSMISSION

Blue mirror lenses decrease visible brightness in intense conditions. A blue-mirrored coating adds a highly reflective layer to the light-filtering properties of a smoke base tint.

Bright, Clear Conditions

Desert Conditions

POLARIZED G-15

11%

LIGHT TRANSMISSION

Polarized G-15 silver mirror lenses maximize transmission of green & yellow light for true to life color. The result is reduced eyestrain and a cooling sensation on the eyes. The polarizing filter increases clarity by reducing glare.

Desert, Reflective Conditions

High Altitude Snow, Cloudy Conditions

Water, Reflective Conditions

High Altitude Snow, Clear Conditions

WELDING IR5 MEDIUM

2%

LIGHT TRANSMISSION

IR5 Welding lenses filter medium levels of infrared light produced during gas welding, brazing, and torch cutting. These dark green tinted welding lenses provide extra protection from harmful UVC rays.

Welding

POLARIZED AQUA PRECISION RED MIRROR

13%

LIGHT TRANSMISSION

Polarized Aqua Precision Red mirror lenses maximize visual clarity and contrast in bright light conditions. Rather than using a layering process, anti-reflective ions are infused into a flame-colored mirror to maintain pristine optics. The polarizing filter increases clarity by reducing glare.

Desert, Reflective Conditions

High Altitude Snow, Cloudy Conditions

Water, Reflective Conditions

High Altitude Snow, Clear Conditions

AQUA PRECISION BLUE MIRROR

12%

LIGHT TRANSMISSION

Aqua precision blue mirror lenses maximize visual clarity & contrast in bright light conditions. Rather than using a layering process, anti-reflective ions are infused into a blue-colored mirror to maintain pristine optics.

Desert Conditions

High Altitude Snow, Cloudy Conditions

Bright, Clear Conditions

High Altitude Snow, Clear Conditions

WELDING IR3 LIGHT

12%

LIGHT TRANSMISSION

IR3 Welding lenses filter low levels of infrared light produced during gas welding, brazing, and torch cutting. These green tinted welding lenses provide protection from harmful UVC rays.

Welding

POLARIZED AQUA PRECISION BLUE MIRROR

10%

LIGHT TRANSMISSION

Polarized Aqua Precision Blue mirror lenses maximize visual clarity and contrast in bright light conditions. Rather than using a layering process, anti-reflective ions are infused into a blue-colored mirror to maintain pristine optics. The polarizing filter increases clarity by reducing glare.
